Foreword

I take pleasure in presenting the 99th Vital Statistics Report compiled by the Office of the Registrar General. This report is prepared in two parts.

Part I indicates the trend over the past years in the general state of health of the people of Ontario. Such general trends emphasize certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1968.

In conclusion, may I state that, while this report is primarily of interest to certain professions and agencies, it will give other interested persons an insight into the vital statistics concerning births, marriages and deaths in the Province of Ontario.

A handwritten signature in cursive script, reading "Robert Welch". The signature is fluid and elegant, with a prominent initial "R" and a long, sweeping underline.

Q.C.

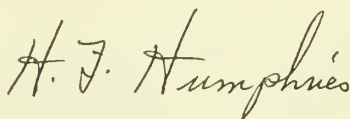

Registrar General.

SIR :

I have the honour to submit for your approval the Ninety-ninth Vital Statistics Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1968.

I have the honour to be, Sir,

Your obedient servant,

A handwritten signature in dark ink, reading "H. J. Humphries". The signature is written in a cursive style with a large, sweeping initial "H".

Deputy Registrar-General.

TO THE HONOURABLE ROBERT WELCH, Q.C.
Registrar General of Ontario.

†Rates not computed for less than 5 stillbirths.

*Previous to 1962 stillbirths of 28 weeks' gestation and over were registered. As of January 1962 stillbirths of 20 weeks and over were registered. For the years 1962-1965 figures for 28 weeks and over may be obtained from Table 22 in the reports for those years and for 1966, 1967 and 1968 from Table 12.

Infant Mortality

Shown in Table I are the numbers of infant deaths by age at death over the ten-year period 1959 to 1968. The steadily decreasing neonatal and infant death rate and the stillbirth rate are shown in Chart 3.

General Mortality

The trend in general mortality over the period 1944 to 1968 is shown in Table M. Tables N to P illustrate the general mortality by age and/or cause. Special detailed tables for specific causes are shown in Tables Q to T. Special cross classification of accidental and violent deaths is shown in Table U.

(1) The former method of coding tuberculosis deaths was amended effective January 1st, 1962, by the Dominion Bureau of Statistics in order to comply with the mortality classification under the International Classification of Diseases. This has resulted in a considerable increase in the number of deaths when compared with the method of coding deaths in previous years.

*Under 1 year of age.

(1) Effective 1962, deaths where the underlying cause was reported as 'inactive', 'healed', or 'arrested' pulmonary tuberculosis were classified to tuberculosis, formerly such deaths were classified to the resulting pulmonary condition.

[illegible]

(1) Excluding Patricia portion.

(2) Effective 1962, deaths where the underlying cause was reported as 'inactive', 'healed' or 'arrested' pulmonary tuberculosis were classified to tuberculosis; formerly such deaths were classified to the resulting pulmonary condition.

[illegible]

(1) Effective 1962, deaths where the underlying cause was reported as 'inactive', 'healed' or 'arrested' pulmonary tuberculosis were classified to tuberculosis; formerly such deaths were classified to the resulting pulmonary condition.

Table 32 Cause of Death by Sex for Boroughs, Cities,
(at the Census of 1966) by Place
